chondrite

June 3rd, 2020 - A Chondrite S Group Is Determined By Its Primary Chemical Mineralogical And Isotopic Characteristics Above The Degree To Which It Has Been Affected By The Secondary Processes Of Thermal Metamorphism And Aqueous Alteration On The Parent Asteroid Is Indicated By Its Petrologic Type Which Appears As A Number Following The Group Name E G

xrd sem and petrologic characterization of a l4 l5

June 3rd, 2020 - in this work a meteorite sample recovered in morocco is characterized by detailed petrographic observations in transmitted and reflected light optical microscopy and by using xrd and sem and it is tentatively classified by vis nir spectral analysis of the same meteorite in a previous study suggested that it is seemingly related to the hamlet meteorite which was classified as 1b chondrite
